

# ITR Introduces OASIS SCH33 Hydronic Heating System

by [RV Business](#) - February 23, 2024 in [SupplySide](#), [Today's Industry News](#)

**International Thermal Research (ITR)**, providers of premium heating systems to the RV industry and the U.S. military since 1984, announces the introduction of the **OASIS SCH33 hydronic heating system**.

Designed to provide luxury, comfort and reliability for smaller coaches, the compact OASIS SCH33 uses ITR's proprietary low pressure burner system that already leads the industry in safety, longevity and reliability, according to a company release.

The OASIS SCH33 features a 33,000 True Output BTU burner, a 1500W AC electric element, and optional on-demand hot water.

The small footprint of the OASIS SCH33 allows for easy installation, and the system features multizone climate control with individual setting to four different areas of a coach. The tank design for the OASIS SCH33 provides freeze-protection, easy air-purging and coolant fill, and has comprehensive on-board diagnostics that can be supplemented with an intuitive touch screen control. The OASIS SCH33 offers optional engine preheat, significantly reducing engine wear and fuel consumption. The OASIS SCH33 is designed with luxury in mind and runs quietly with no smoke or smell.

Like all OASIS products, the OASIS SCH33 is backed by ITR's renowned service support at ITR's factory and service locations, as well as at over 160 service and dealer locations in North America and the United Kingdom.
